

Ecointesys

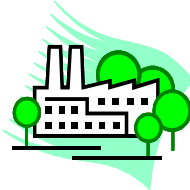

Life Cycle Systems

As an EPFL Start-up, Ecointesys – Life Cycle Systems is aiming at:

- Promoting our customers' performance and competitiveness (multinationals, SME and public institutions) through a proactive approach handling environmental issues.
- Proposing tools and scientific methods based on « Life Cycle Thinking », integrating environmental risk and sustainability concepts.
- Operating these tools to optimize Quality and Environmental Management.

Ecointesys – Life Cycle Systems rely on a strong international network of scientific experts (EPFL – Switzerland, University of Michigan - USA, Montreal Polytechnique – Canada) with close industrial partnership.

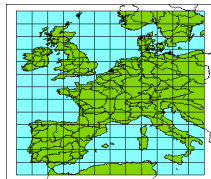

Environmental Management

Key actor for setting **Environmental Management Systems** (pharmaceutics, mechanical, banks, and transports sectors).

Provider of Green-e an innovative environmental management tool at the company level based on Life cycle approach.

Environmental Risk & Impacts

Impact and Risk assessment at local, regional and continental levels based on the use of **IMPACT 2002 et IMPACT 2002+ models**, multi-media fate and exposure tools.

Life Cycle Assessment

Carrying out LCAs as the European LCA leadership in telecom, buildings, water treatment, waste, biomaterials and composite materials sectors.

Combining LCA results to Life Cycle Costs assessments.

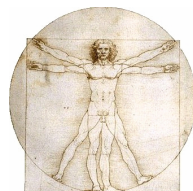

Green investment - Sustainability

Advanced methodology defining new sustainability indicators integrating Economical approach (Input-Outputs) within LCA.

Environmentally responsible corporate management and investment based on innovative life cycle thinking.

Training activities

Two types of **operational training** for LCA, environmental management and risk assessment: academics and continuing education-style courses for its clientele from the private and government sectors. Many course formats are available ranging from a one to three day course. Possibility to link such training with Green-e first hands on.
